

Corporate AI Training.

Your company bought the seats and told everyone to use AI. Nobody taught them how it thinks. We teach our nine-lesson course, **The Brain and the Desk**, live for whole departments: how AI assistants actually work, taught inside the tools and policies you already have. Copilot, ChatGPT, Claude, or Gemini.

THE CURRICULUM · NINE LESSONS, THREE PARTS

Foundations L1-3

What a model is, what it can hold, and where it fails.

The Craft L4-7

Prompt and context engineering, agents, and skills, practised on your team's real work.

The Path L8-9

The Copilot-and-Claude decision, and a before-and-after experiment your team runs that week.

HOW IT'S DELIVERED

- One-day intensive, or four weekly 90-minute sessions
- Cohorts of 8 to 20 · on-site in the GTA, or remote
- Before the first session we collect real tasks and sample files from your team
- Taught inside your acceptable-use and data-classification policies

YOU KEEP

- The playbook and the prompt-and-skill library your cohort builds
- A completion record for each participant
- 30 days of async questions and one office-hours call, every pack
- Recordings, if remote

PACKS · PER COHORT, CAD, PLUS HST

The full path · all nine lessons	\$12,500
OUR RECOMMENDATION	
Full craft · through lesson 7	\$10,000
Working craft · through lesson 5	\$7,500
Foundations · through lesson 3	\$5,000
Executive briefing · 90 minutes, for leadership	\$2,000
Harness development · we build your prompts, skills, and agents; scoped by what you want built	from \$15,000

At a full cohort of 20, the whole course is \$625 a person. Either delivery format, same price.

READ LESSON ONE FIRST

Lesson one of the course is free and whole, no signup: what a model is, what “thinking” means, and why the harness around the model decides the results you get. If the way we teach does not land with you, better to find out here than in a session.

WHO TEACHES IT

Trellis is a brand, digital, and AI studio in Toronto. We build AI automation for our clients and run our own studio on it. We do not sell software and we are not tied to a vendor: if your company runs on Copilot, we teach Copilot.
